JSM Statistics In Sports: Undergraduate Research Competition

1st Place

But I hate networking?

What Networking Shouldn't Be

- Only wanting to talk to the "important people"

- Groveling to people trying to get hired

- Faking interest in conversation

What It Should Be

- Being interested in other people's work (regardless of whether they can hire you or not)

- Letting people know your career plans naturally

- Talking about things you are interested in

What if I don't win?

Hackathon Tips

- You're not gonna win all of them. I don't either

- Have fun!

- Find competitions that genuinely interest you

- Find classmates who are good teammates and hard workers

    - Spend time with the student union

- Make sure you submit "something"

- Don't let imperfections stop you from moving forwards

My First Week

Learned a lot about health care system and their data.

Learned about the culture of an agile environment and pitched an idea for a model.

What I Enjoyed

Having a positive impact and improving the public's health and safety.

A fantastic team! Honest, respectful and tough discussions to make the best decisions for the team.

Biggest Challenges

Messy and incomplete data. No one to show us the way.

Delivering results on the schedule the business needed.

Thank You!

Any Questions?
